SEPTEMBER 2023

Accelerating Sales Reps

Executive Stakeholder Interviews Review

Our process for booking, sourcing, & enterprise

A high-level overview of how we got here.

Type	One Team, One Vision 16 weeks		
	SEPTEMBER	OCTOBER	NOVEMBER
Activities	- Document Review - Stakeholder Interviews - Product Team Workshops - Systems Mapping	- Light Competitive / Comparative Analysis - North Star / POC Ideation - Alignment workshop - Product Strategy Definition	- Visual Proof of Concept - Design System Review
Deliverables	- Systems Maps - Product Strategy Documentation - Workshop Artifacts - Product Strategy, North Star & KPI Documentation	- Workflow diagrams (focused on 3-5 primary flows, depending on complexity) - Storyboards & Low-fidelity Concepts (focused on fleshing out experiences around primary flows and supporting modules/screens.) - Design System Recommendations	
Echo Team Engagement	- Stakeholder Interviews - Workshop(s) - Regular reviews (1-2/wk)	- Workshop(s) - Regular reviews (1-2/wk)	

Approach to our competitive analysis

In the spirit of furthering our design discovery, we kept the following questions in mind as we reviewed a portion of the competitive landscape:

1. What baseline capabilities are common across the industry?
2. What does the competitive landscape show in terms of feature set differentiation? (e.g., how is communication handled, task management solutions, etc.)
3. What industry standards or best practices should be considered when thinking about Accelerator? (e.g., layout design, common navigation/interaction patterns).

Evaluate predetermined capabilities for carrier reps + enterprise workflows.

Analyze direct competitors & comparators.

Keep the carrier sales experience top of mind.

OVERVIEW

Feature parity versus value for users

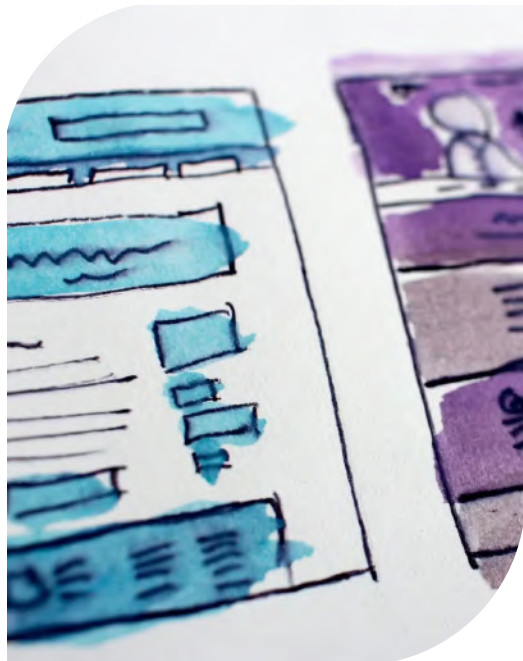

While the competitive analysis doesn't necessarily speak directly to our user's needs, it can help inform how your competitors are trying to tailor capabilities — but this doesn't mean that features or solutions are automatically right.

It is important to conduct with an open mind to help further the design ideation process as well as provide a jumping-off point for enhancements and innovation for your audience.

OVERVIEW

We focused on four target capabilities we wanted to explore further in design

In-app communication

Explore in-app capabilities that promote effective knowledge-sharing while helping to resolve issues quickly

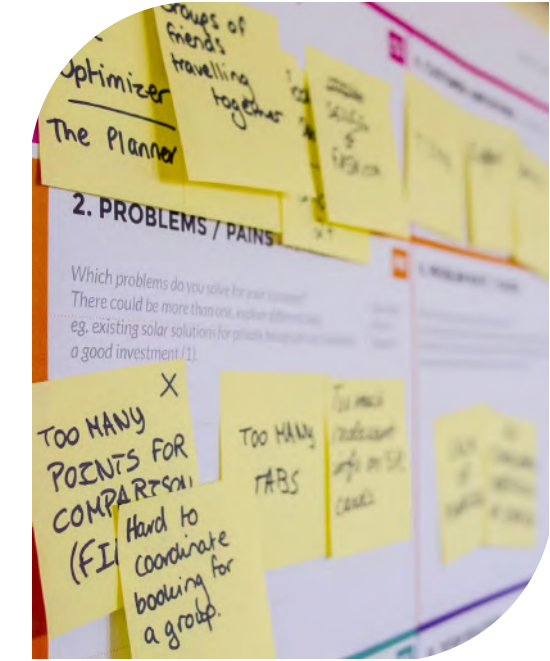

Task prioritization

Look for interaction patterns and features that may help users save time and perform critical tasks quickly

Alerts & notifications

Observe how these are used to help define types of alerts/notifications, when to use/cadence, and best UI implementation

Workflow efficiency

Consider information design, and intuitive layouts that help users move through the experience with ease and higher performance
