

| Key findings

01_ In-app communication

Explore in-app capabilities that promote effective knowledge-sharing while helping to resolve issues quickly

KEY FINDINGS: IN-APP COMMUNICATION

Activity panel that helps supports collaboration and quick problem-solving.

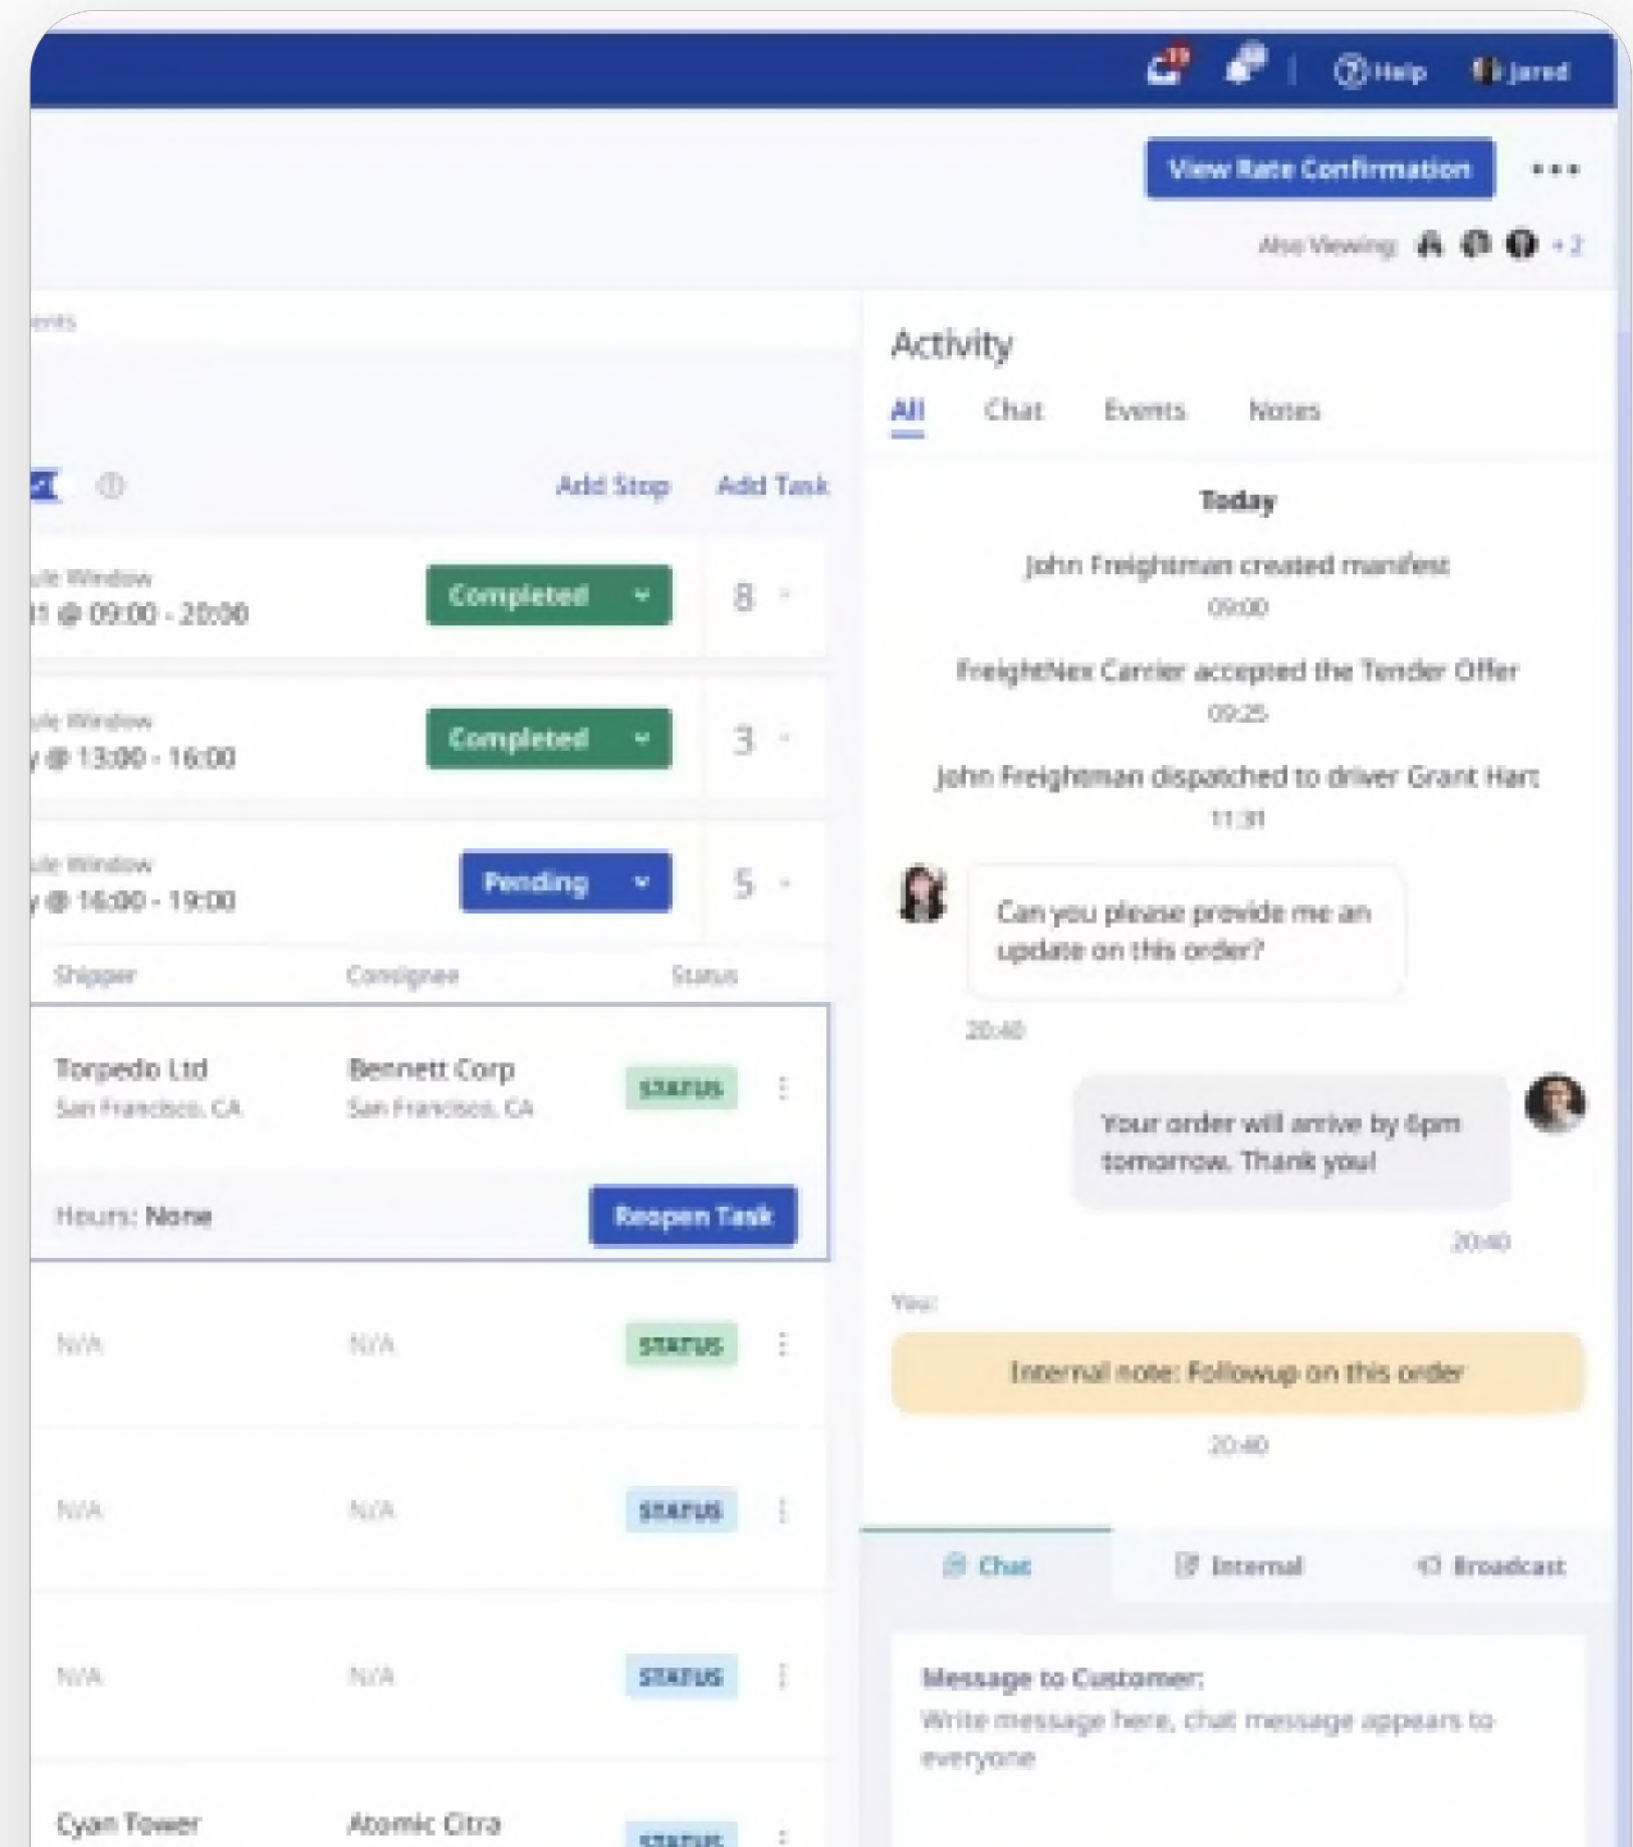

Observations

1. Use of the right-hand panel for "Activity" which is dedicated space on the page
2. Use of tabs structure to filter chat "siloes"
3. Can create internal notes in real-time

Design considerations for Accelerator

1. Dedicated space within the larger layout provides ease in wayfinding and establishes prominence.
2. Given the inability to collapse or close, need to consider page real estate and weigh the pros/cons of how to best utilize the space.

ROSE ROCKET EXAMPLE OF DEDICATE RIGHT-HAND PANEL FOR CHAT + POSTING INTERNAL NOTES

KEY FINDINGS: IN-APP
COMMUNICATION

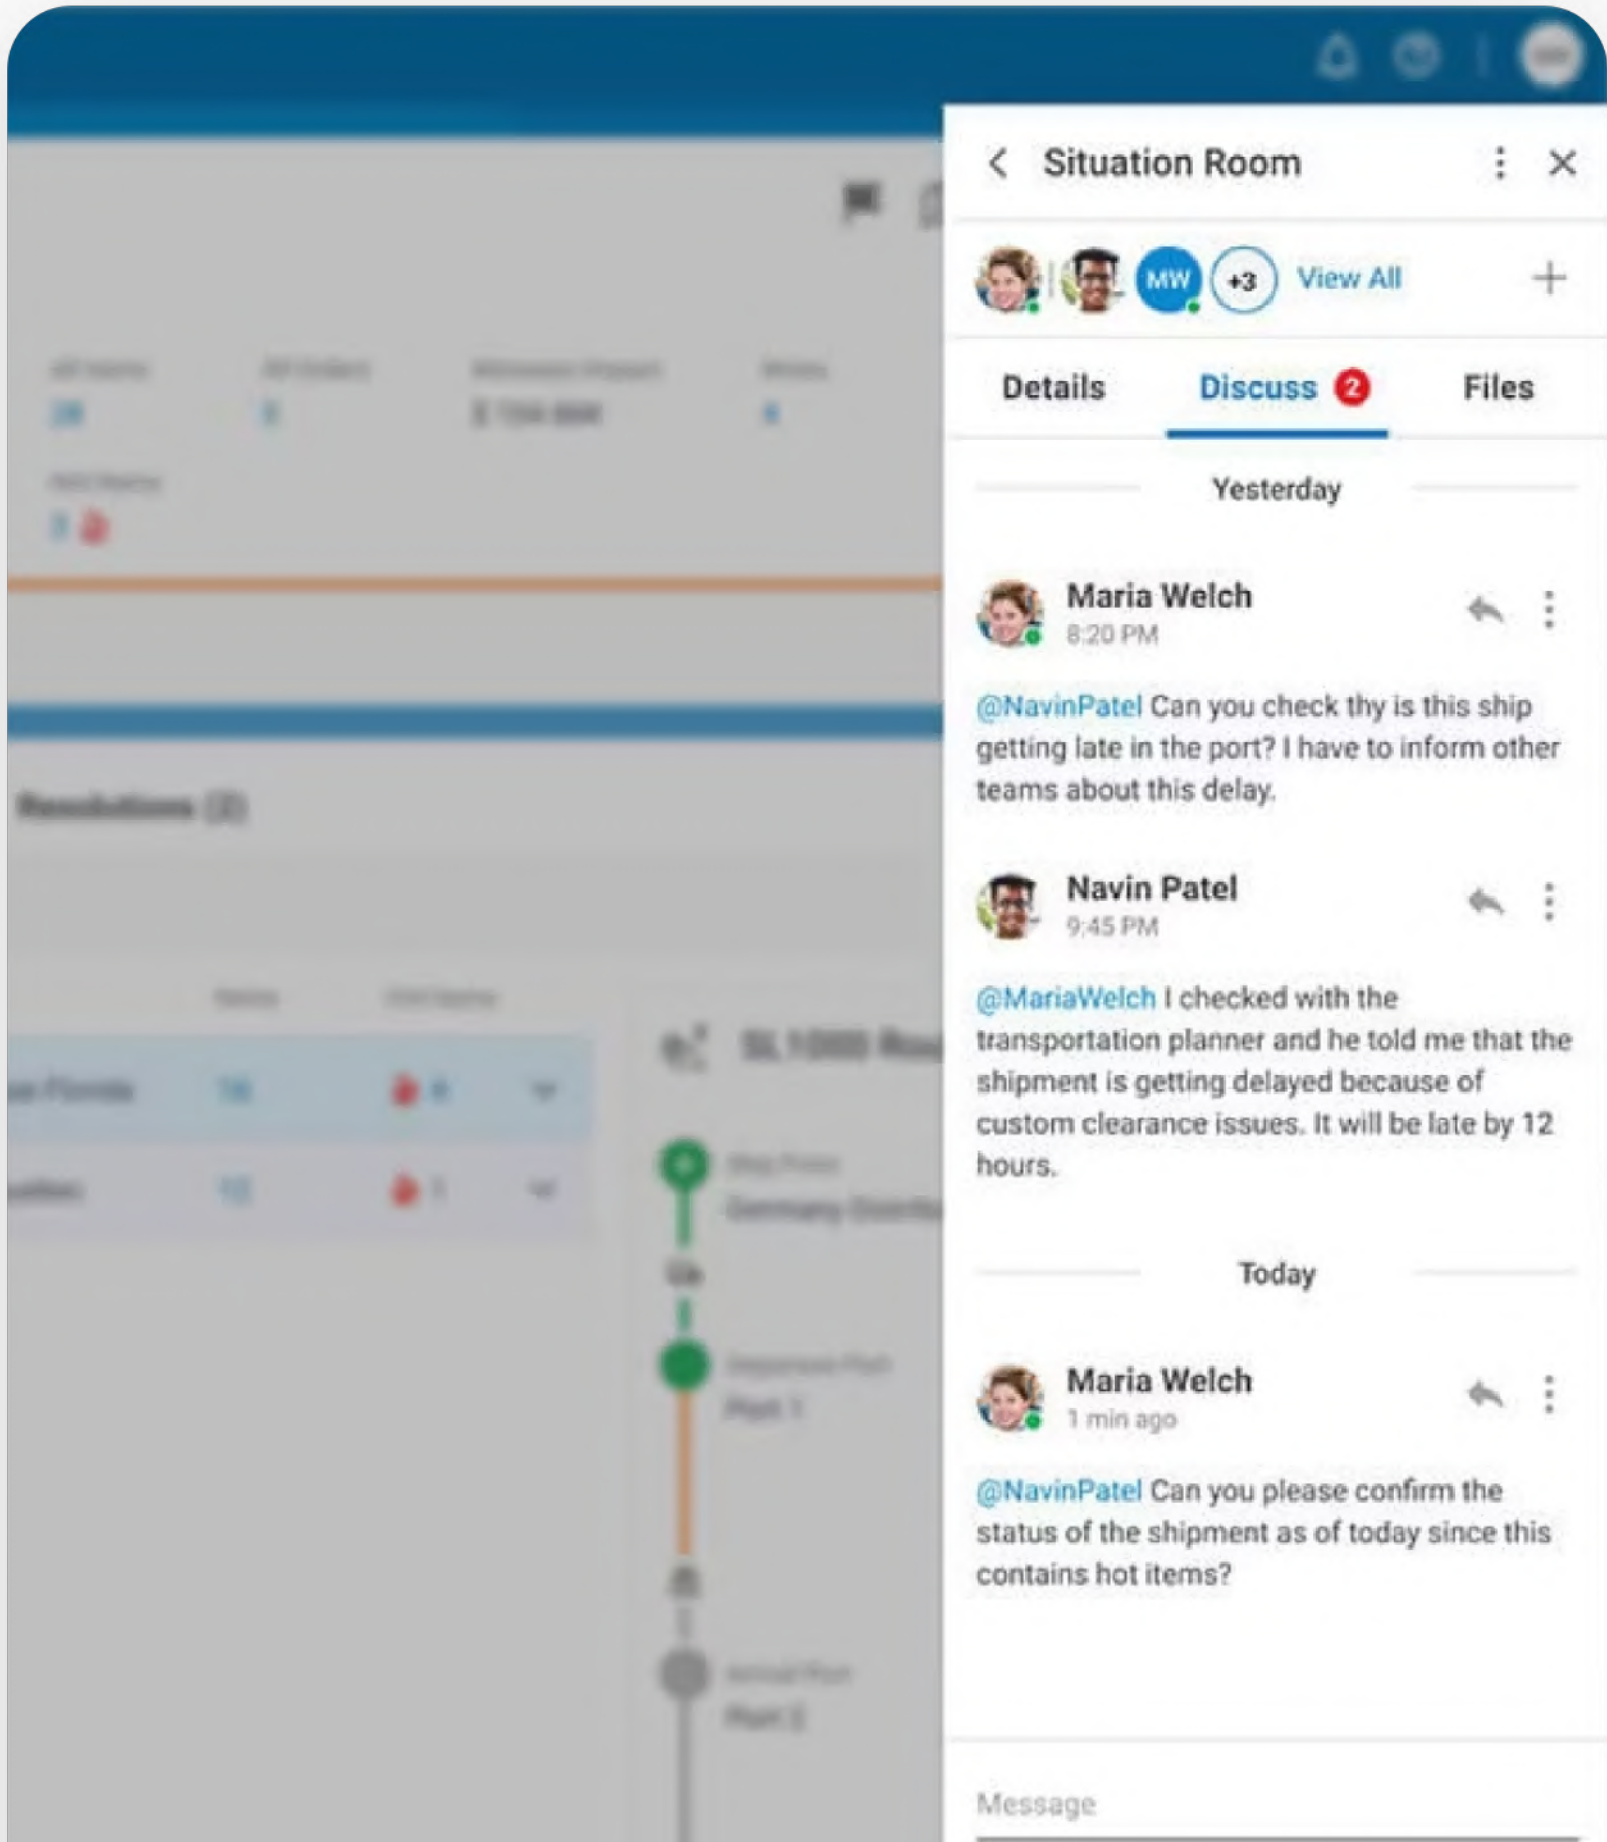

A real-time chat offers users a quick and proactive space to interact.

Observations

1. In-app chat and collaboration focused within sheet or drawer style UI interaction pattern
2. Use of tabs structure to filter chat "siloes"

Design considerations for Accelerator

1. The sheet allows the ability to display a possible list of actions, chat features that may relate to or affect the screen's primary content. The ability to open/close adds flexibility
2. Use caution when implementing and using sheets within sheets, as it lead to usability challenges.

KEY FINDINGS: IN-APP COMMUNICATION

Chat as a nav item elevates messenger capabilities allowing for dedicated space for chat features.

Observations

- 1. Dedicated view for communication
- 2. In-app chat functionality to promote faster collaboration

Design considerations for Accelerator

- 1. Larger real estate for chat-based activities and in-app collaboration
- 2. Users would likely have to navigate away from active tasks/chat is no longer in the context of load details
