

02_ Task prioritization

Look for interaction patterns and features that may help users save time and perform critical tasks quickly

KEY FINDINGS: TASK PRIORITIZATION

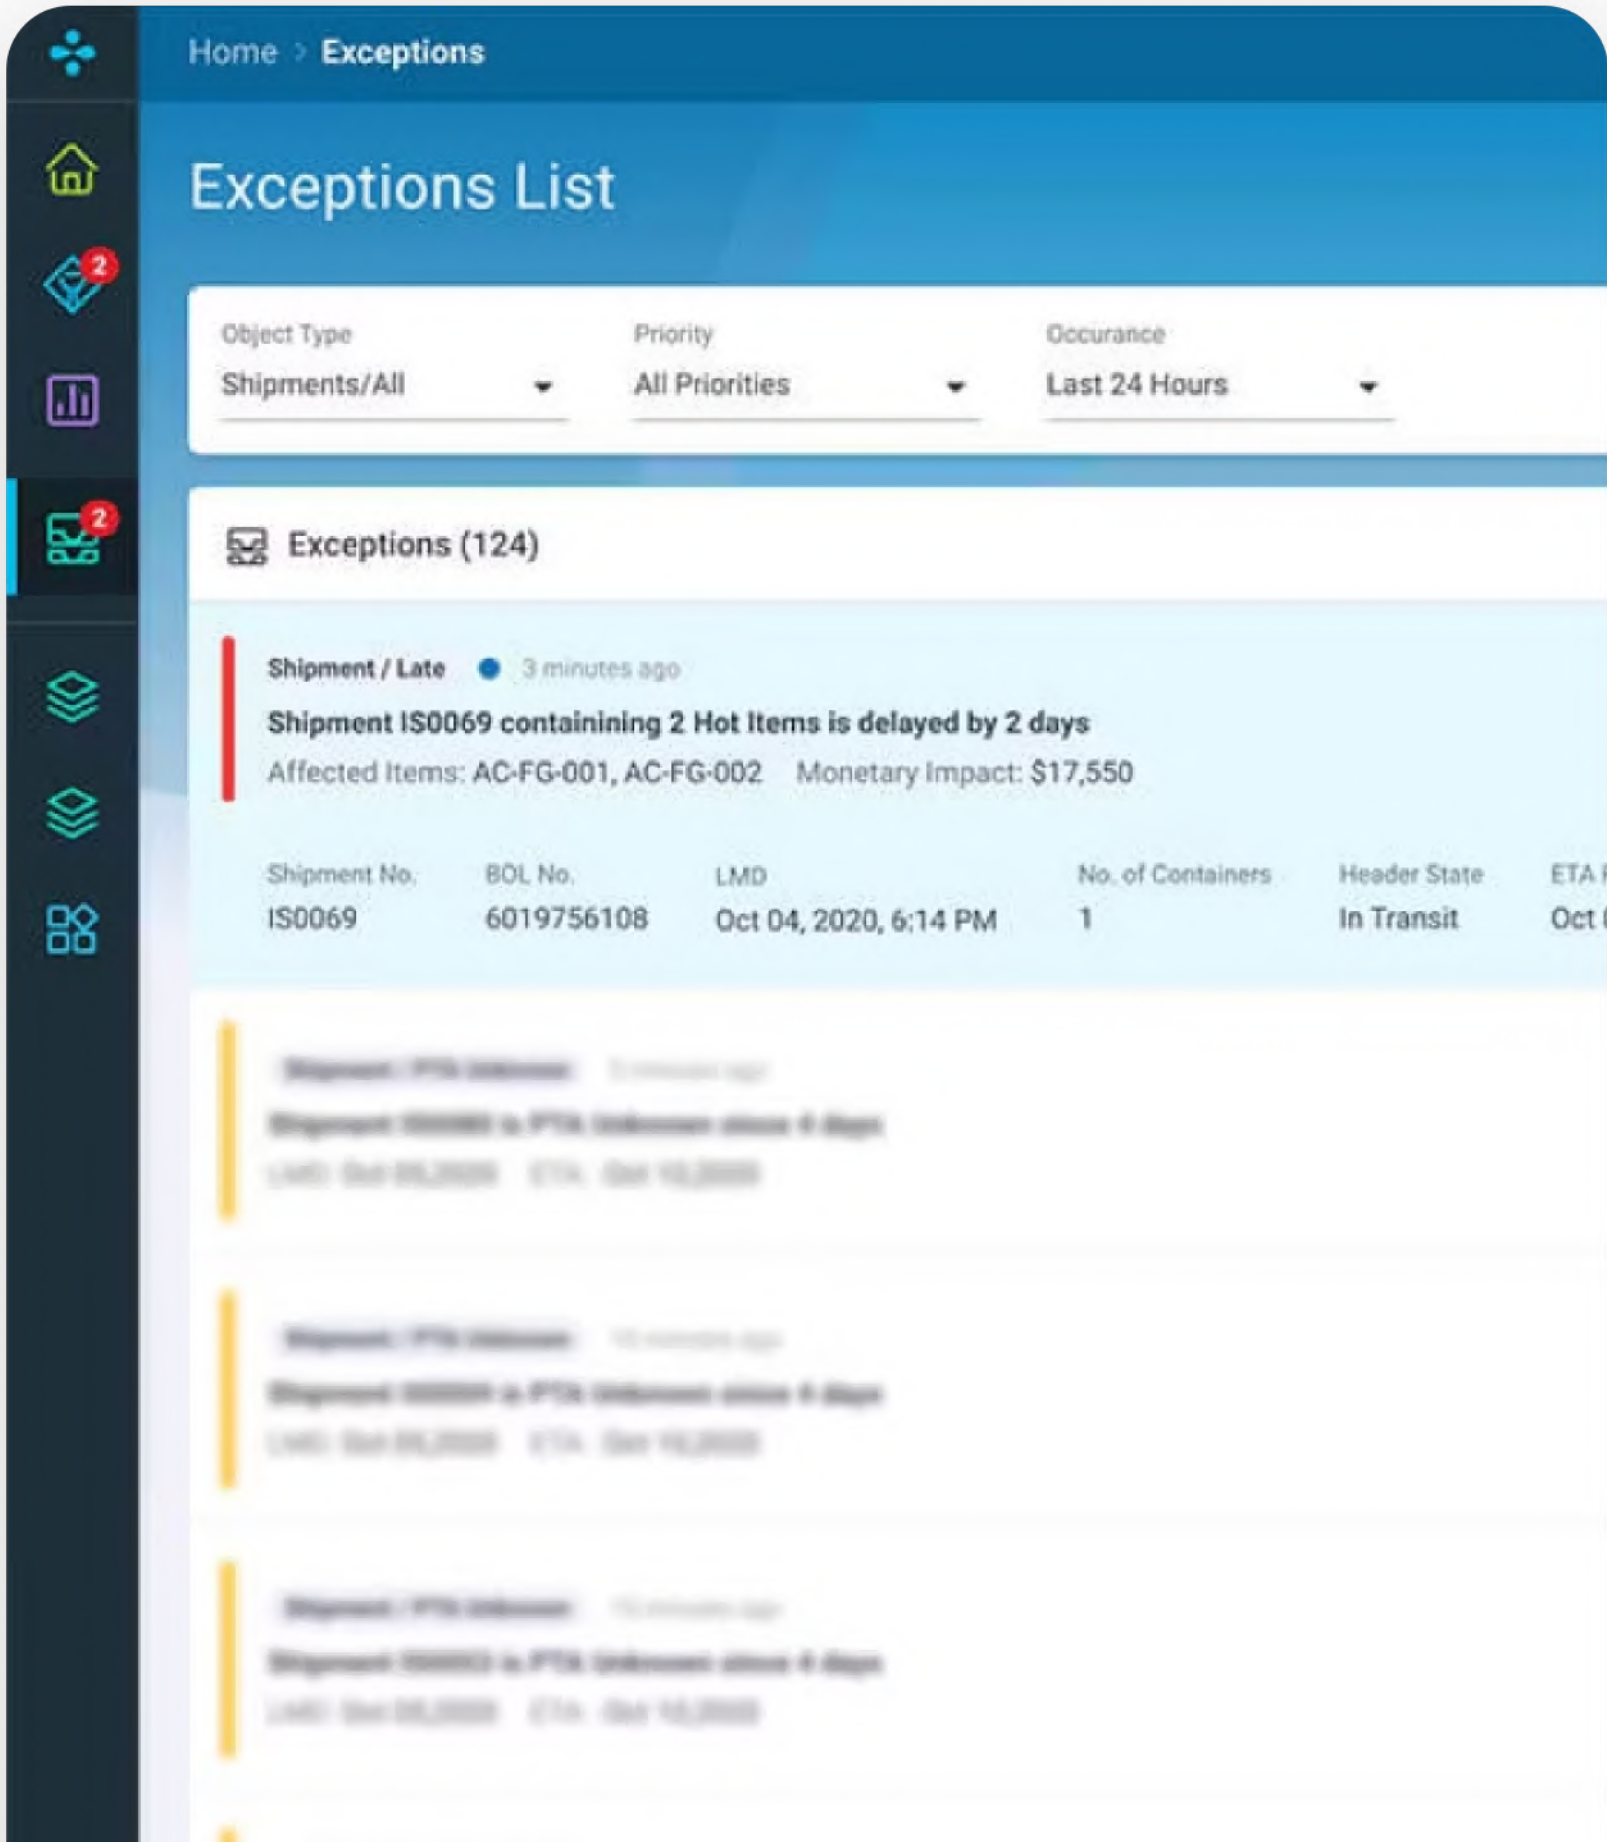

Organize information in a streamlined manner for maximum efficiency

Observations

- 1. Dedicated view for tasks with visual indicators such as color, time posted, and unread badging to help users action fast and quickly identify what's new/unread
- 2. Task prioritization and the ability to filter task lists quickly by type, priority, and occurrence

Design considerations for Accelerator

- 1. Consider the benefits/disadvantages of a full page view or "hub" for users to navigate to throughout their workday

KEY FINDINGS: TASK MANAGEMENT EFFICIENCY

Allow tracking of user tasks and increase visibility into workload

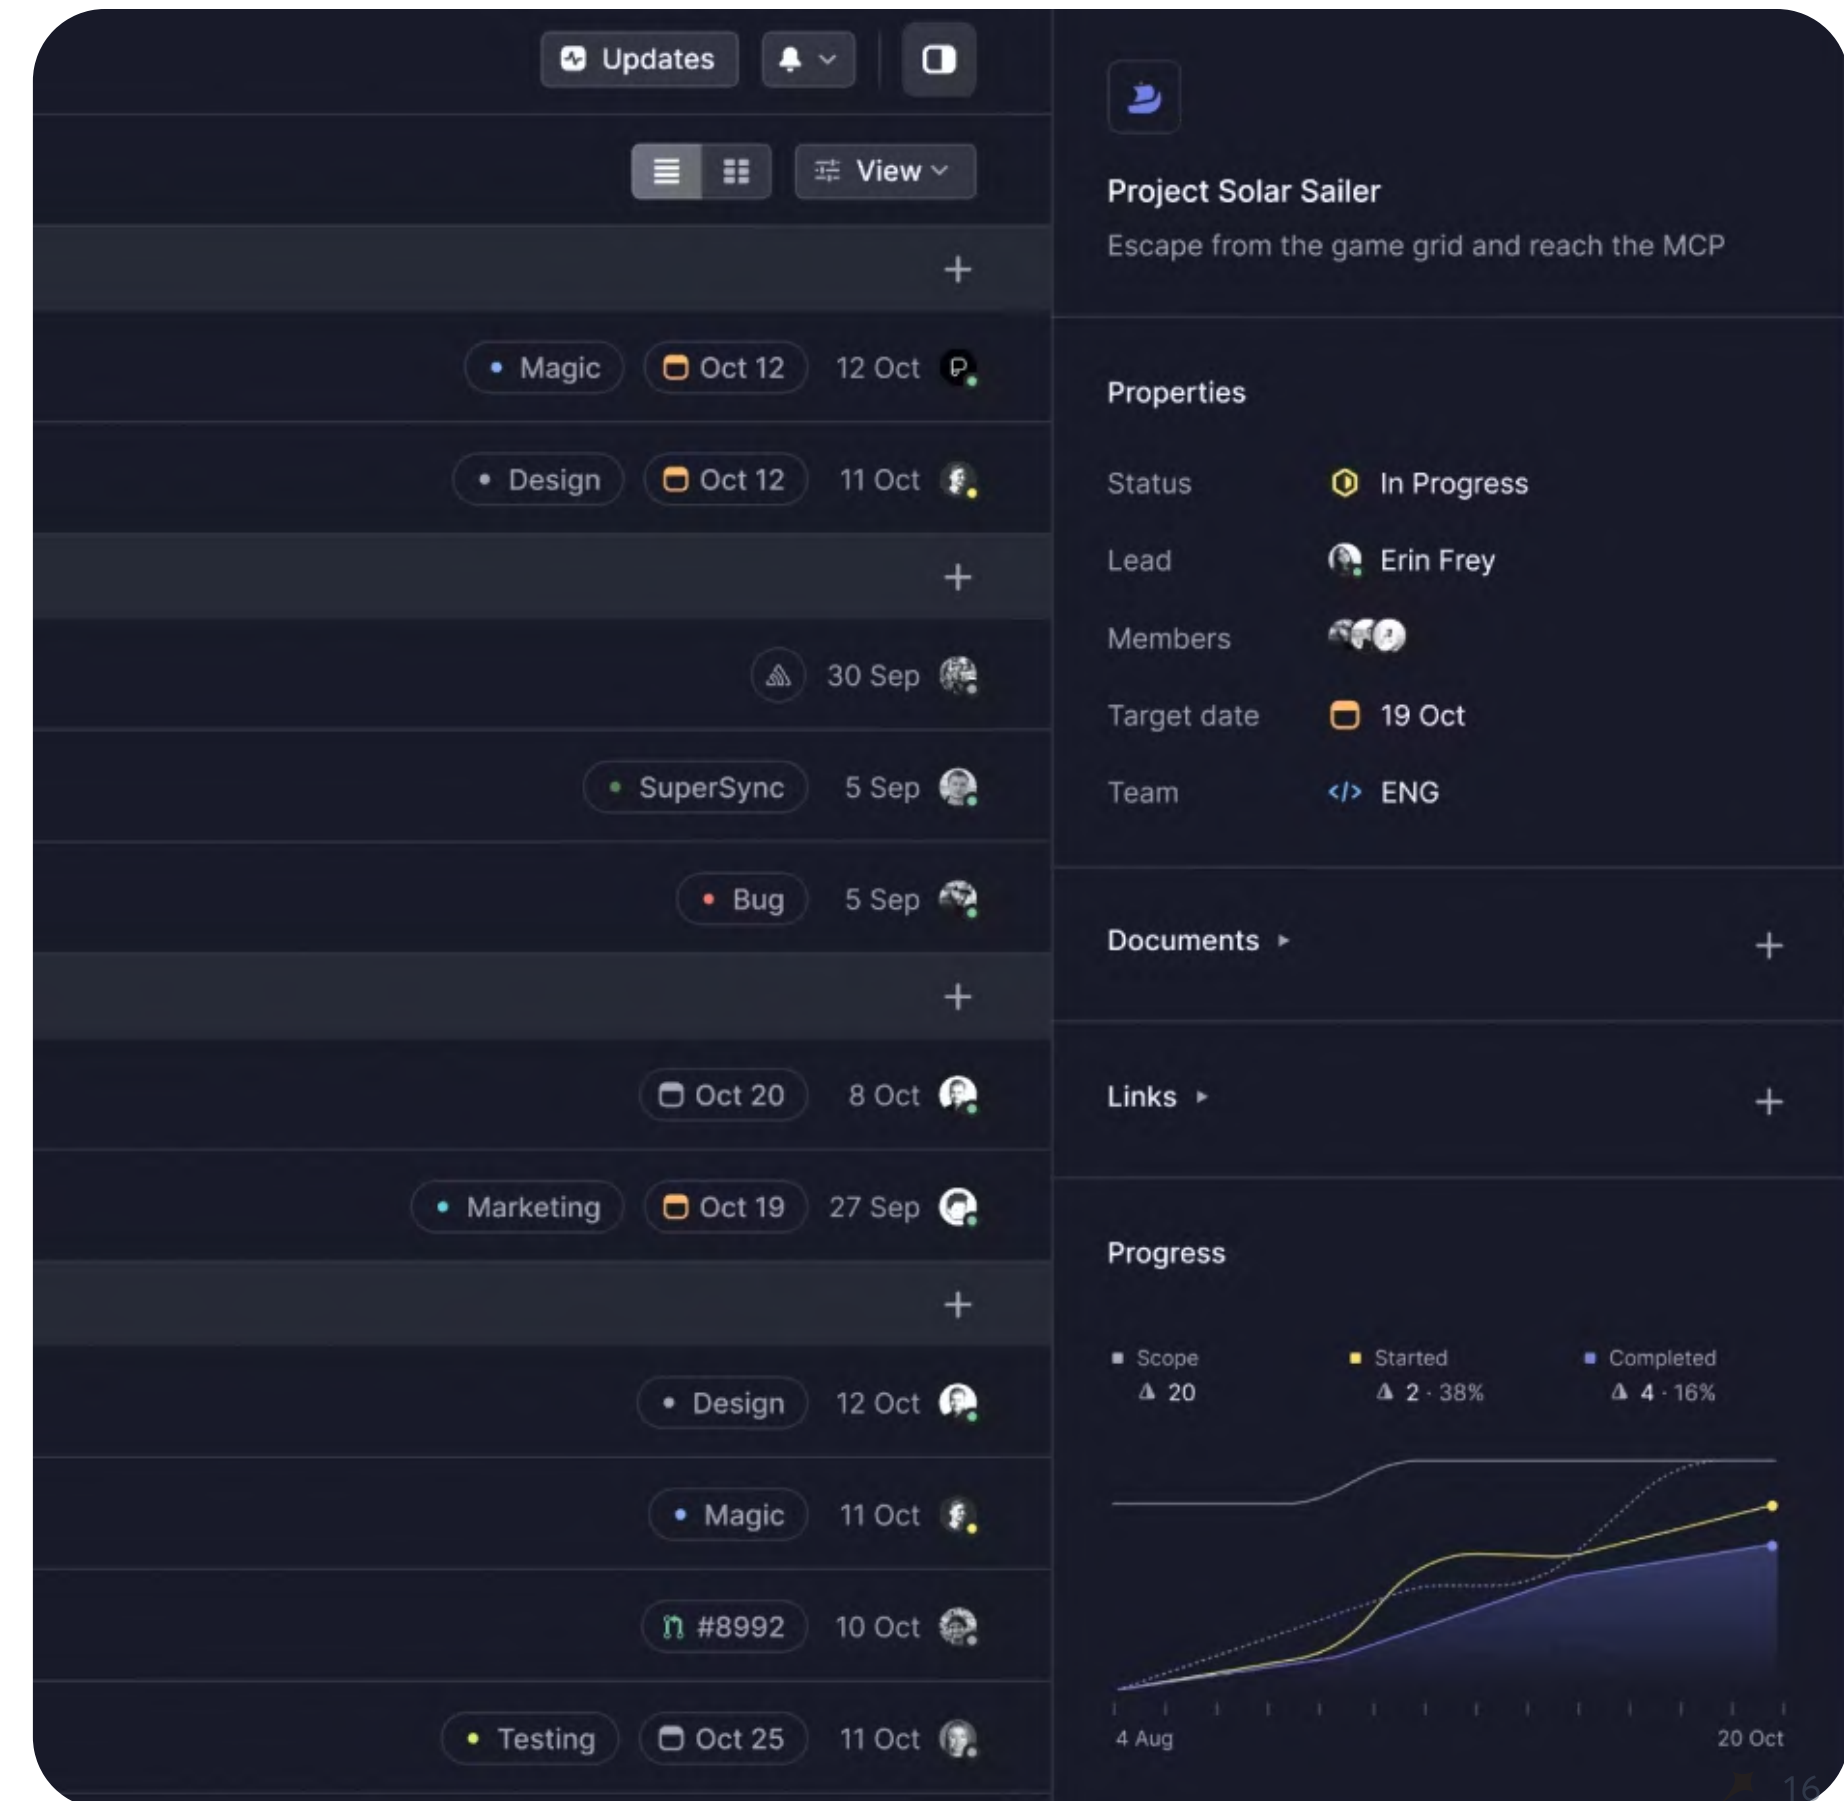

Design considerations

1. Easy-to-read side panel elevating quick stats of the project while using an accordion structure to organize additional data/info
2. Tasks are user-assigned, labeled + due dates for at-a-glance understanding of where something is

Considerations for Accelerator

1. Given the inability to collapse or close, need to consider page real estate and weigh the pros/cons of how to best utilize the space.

LINEAR EXAMPLE

KEY FINDINGS: TASK MANAGEMENT EFFICIENCY

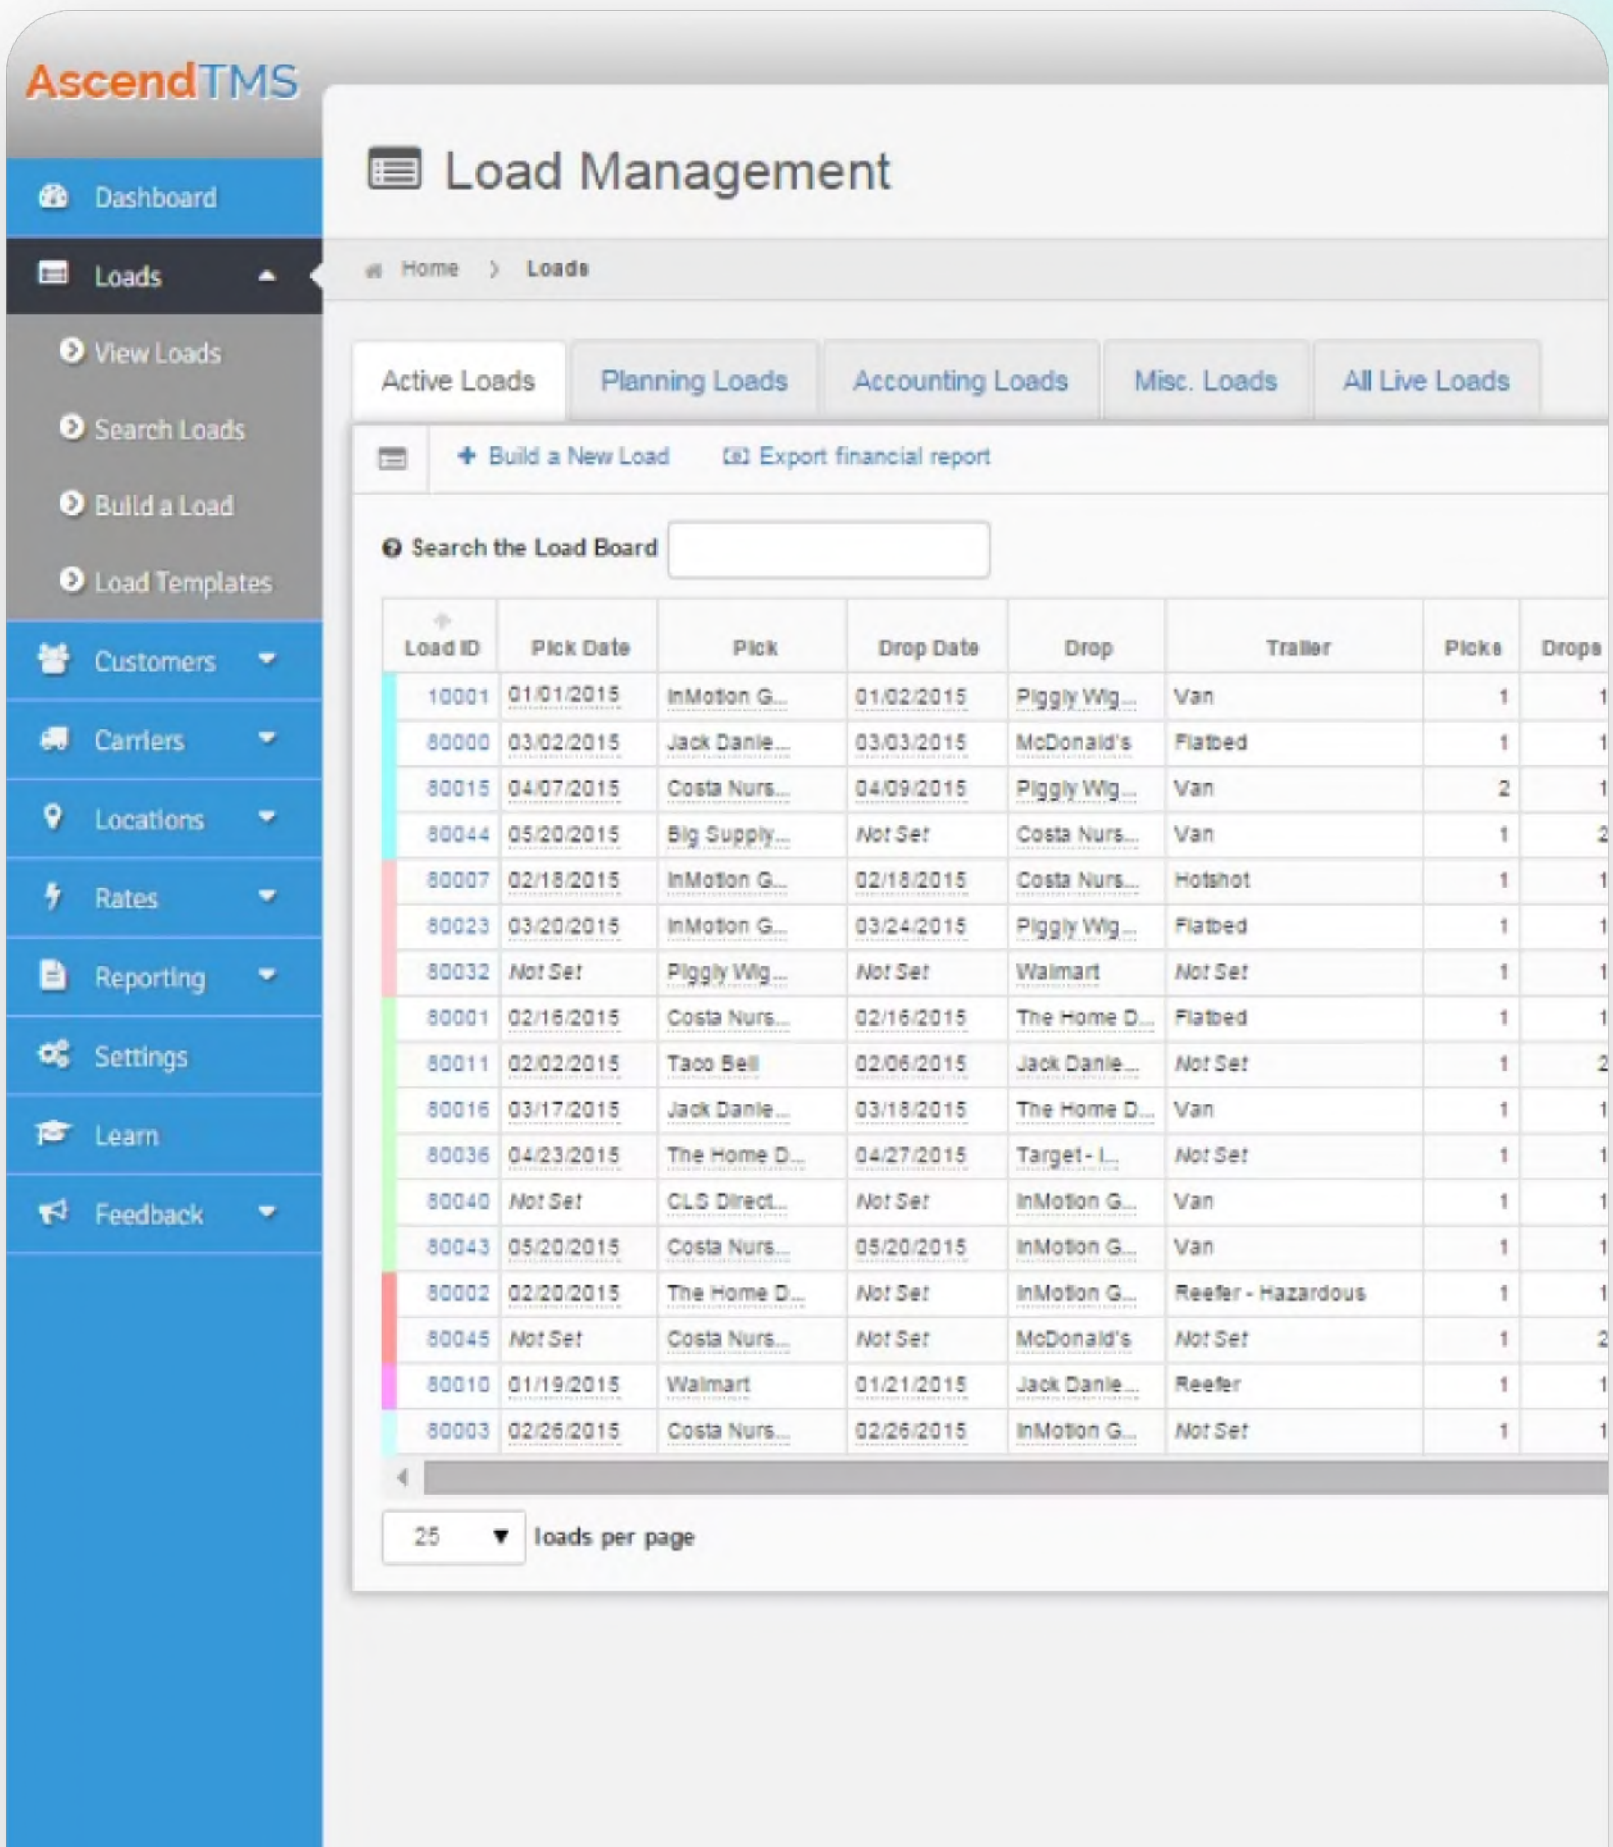

Use of table customization and filtering for quick tasking.

Observations

- 1. Ability to filter on load type for quick tasking
- 2. Lots of flexibility re: table management actions to get the user to the information they need quickly
- 3. Quick actions surface to the top for easy access

Design Considerations for Accelerator

- 1. Given the inability to collapse or close, need to consider page real estate and weigh the pros/cons of how to best utilize the space.

03_

Alerts & notifications

Observe how these are used to help define types of alerts/notifications when to use/cadence, and best UI implementation

KEY FINDINGS: ALERTS & NOTIFICATIONS

Notification customization and filtering for quick tasking

Observations

- 1. The banner at the top of the page displays a glance roll-up of total alerts based on urgency
- 2. Quick filters and search helps users get to what they need fast.

Considerations for Accelerator

- 1. Given carrier reps work in a business of exceptions, consider ways to help elevate critical tasks
