

Hair care is healthcare, both physical and mental

Ever had a bad hair day? We all have. The impact of hair on mental health can not be ignored. Studies have shown that hair can have a strong psychological impact on us all. Poor hair quality can lead to stress, anxiety, depression, loss of confidence, low self esteem, suicidal thoughts and social phobia.

How consumers **feel** about their hair is an important consideration, and we will look for ways to **empower** users of the HairCode Platform to **share** their stories and find emotional support when needed.

Together we will ensure that every curl, coil and strand is celebrated by empowering everyone with the education and the hair care management they need to **feel beautiful and healthy on the inside and out.**

The smartest hair diagnostic and regimen recommendation tool in the industry

For the HairCode platform to be the smartest tool in the industry, **it is going to require a lot of data** tied to actionable insights driven by **best-in-class data scientists**.

Our team will ensure a **proper foundation** is in place to ensure data quality, scalability, industry standard security, and regulatory compliance, while allowing P&G to easily maintain corporate governance.

This data structure will not be limited to just supporting HairCode. It will be a **repeatable approach** to address P&G's growing 1st party data needs.
