

Hunters are focused on a complete solution.  
And they'll build it if it doesn't exist.  
This is our opportunity.

### Hunters want a single solution

Mentioning apps online gets met with groans and skepticism. And your audience is hopeful - and actively looking - for "a new competitor [that could] pair the map quality of Huntstand with the hunt planning of GOHUNT."

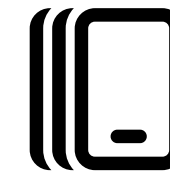

*"Not. Another. App."*

### Hunters need more than odds

GOHUNT may be a complete research tool, but hunters - especially newer ones - need more support: only one respondent out of 65 (1.5%) used solely GOHUNT on their most recent hunts.

*"[GOHUNT] covers bases decently well, but underperforms gaiaGPS and OnX hunt."*

### Hunters regularly use 2+ apps

Contrary to their stated preference, most hunters will use at least two apps during a hunt, from planning to the trip itself: 63% of respondents used multiple apps on their most recent hunts.

*"I got both. If you're planning trips that are too far away to scout, they are worth it."*

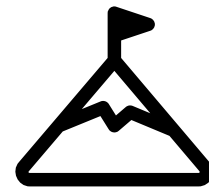

# The value of mapping is clearer than draw odds. Integration could accelerate conquering.

## Hunters opt for mapping alone

95.9% of respondents that used a single tool used one that focuses primarily on mapping, like OnX. And less than a quarter used draw odds at all on their previous hunt, compared to the 85% that used mapping.

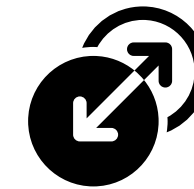

*"The odds don't change year to year...it's not exactly a repeated necessity."*

## OnX capitalizes on this

They dominate via brand, influential partnerships, and perceived switching costs: "OnX fanboys..will continue to use it because they don't want to transfer waypoints or try something new".

*"If I were a brand new hunter I would think OnX is the king...and everything else is trash"*

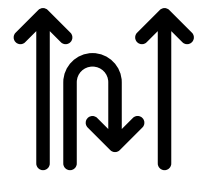

## GOHUNT users *also* use OnX

But not vice-versa. While 9.2% of respondents use GOHUNT, 83% of those *also* use OnX. Meanwhile, 55.4% of all respondents used OnX *and not* GOHUNT.

*"If TopRut is at all competitive with Eastman's or GoHunt it would be a no-brainer to get the elite bundle."*

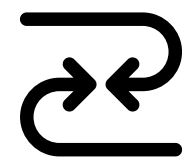

Hunters struggle to understand GOHUNT's value prop.  
Clarifying our position and providing oversight and coaching to illustrate our value, will net positive.

### Draw odds are misunderstood

While some users praise the unique data and time saving value of the research tools GOHUNT provides, these are often drowned-out by complaints about inaccuracies or the perceived commodity of the data.

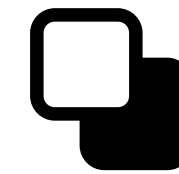

*"It's easier to just download the draw results, import to Excel, and do the analysis there than use the GoHunt filtering tools."*

### Content is polarizing

Some users feel strongly that the strategy articles and unit specific info are holy grails. Meanwhile, 97% of respondents to our survey use articles like these rarely, if ever. And 54% are annoyed to see these included in subscription pricing.

*"They're a good source for outdoor related news. But...this is a BS problem. Because that isn't why I am paying them."*

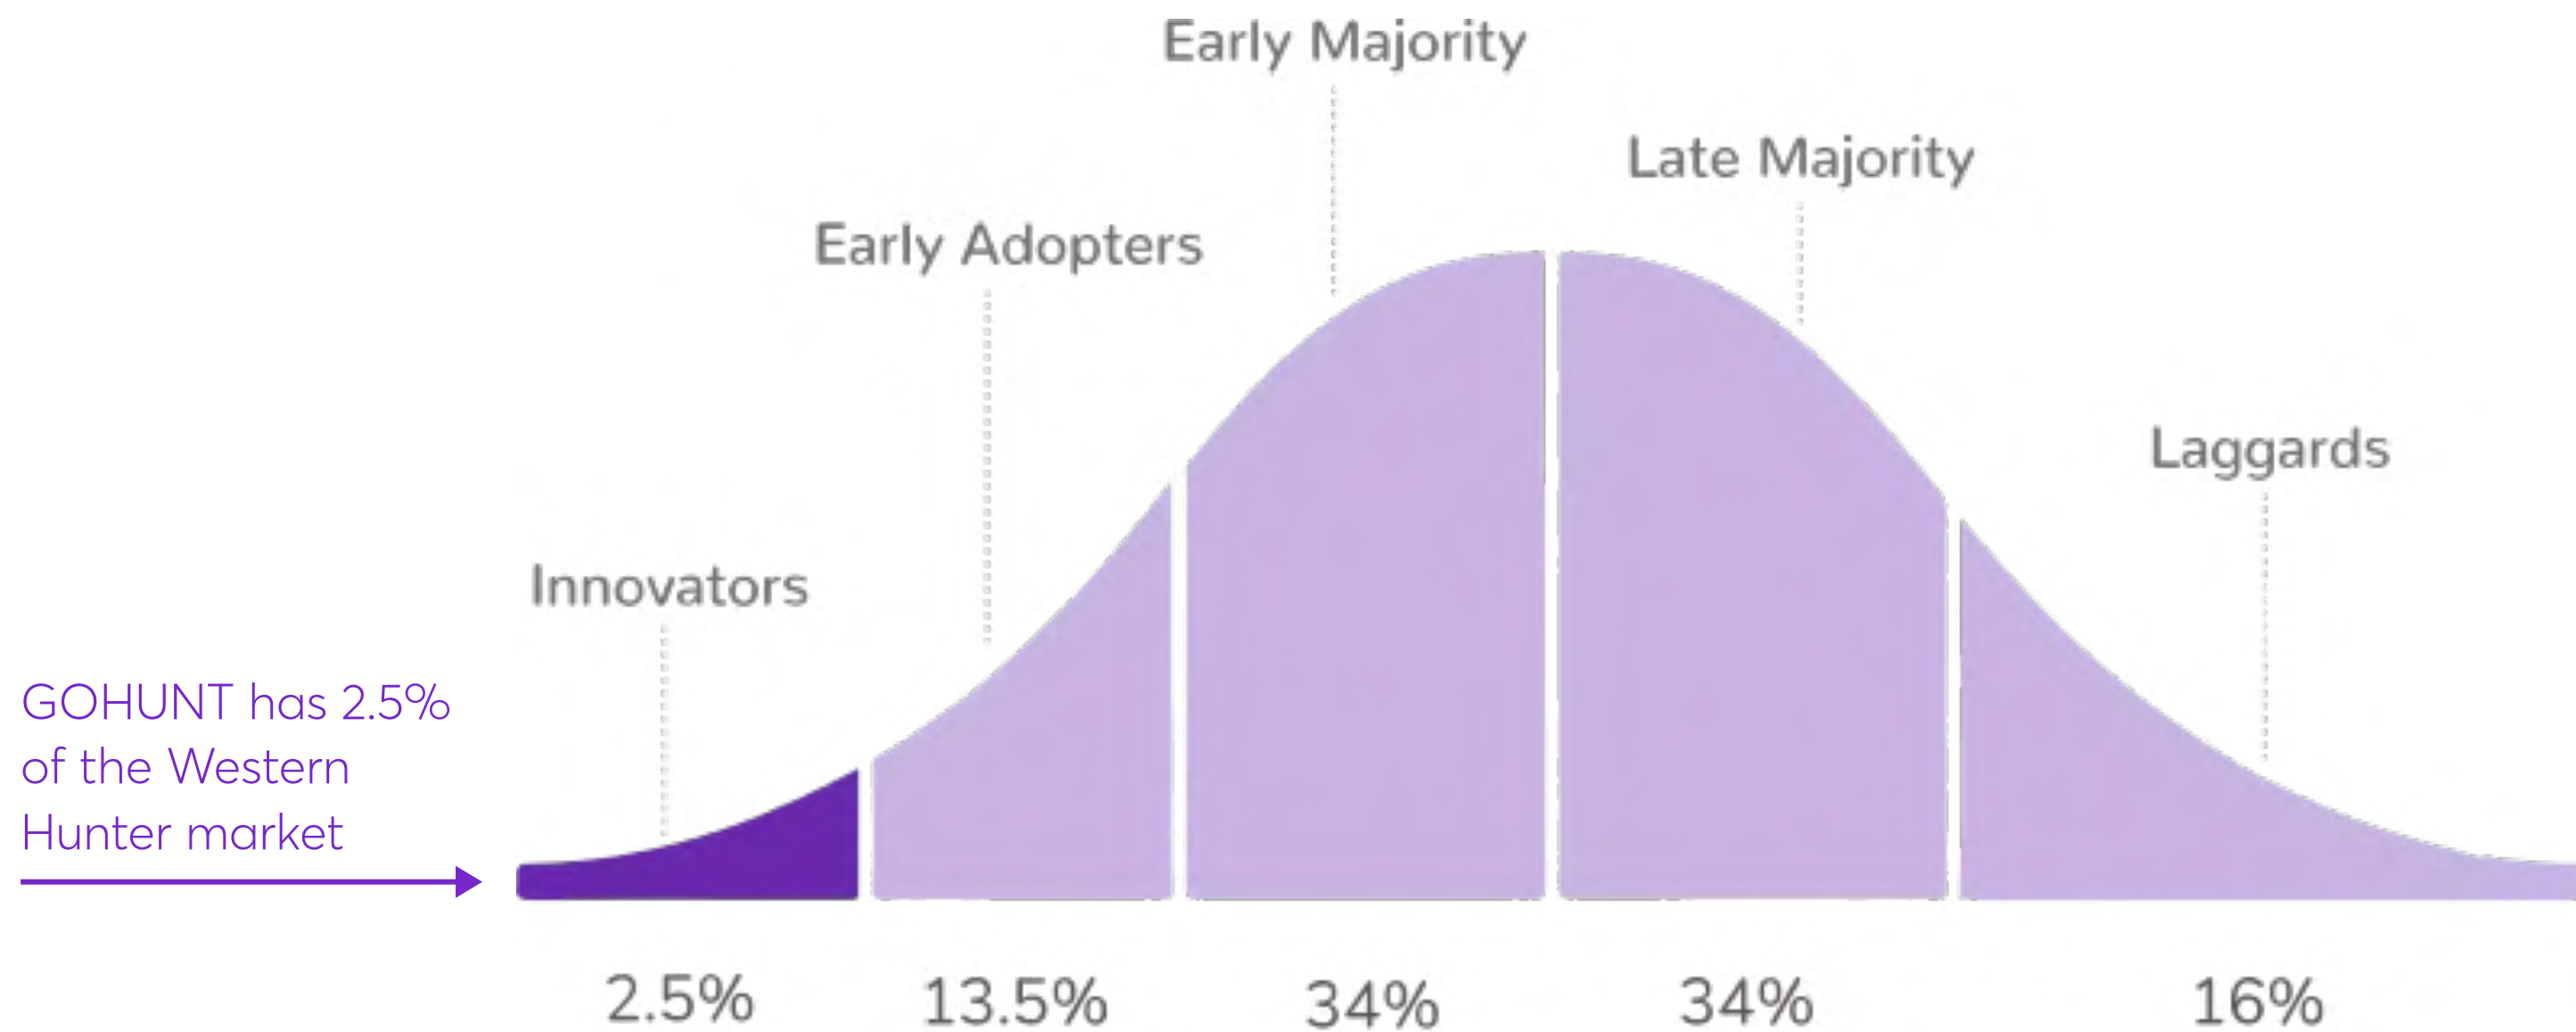

### Comparison isn't easy

First impressions skew heavily ecommerce. And even with differentiated data, complaints around the mapping experience and comparisons to mapping apps came up time and again in app reviews, forums, and conversations.

*"I was hoping this app was going to be different than all the other apps but it's not."*

## INSIGHTS

Growth has stalled because you've captured your best users.  
We believe we can expand your audience base.

The background image shows two individuals in a natural, brushy environment. The person in the foreground is a man with a beard, wearing a camouflage hooded jacket, looking upwards and to the right. Behind him, another person is partially visible, also in similar attire. The entire scene is overlaid with a semi-transparent purple filter.
