

The Apathetic

What they think now:

Energy is a big confusing mystery to me. Yeah, it all sounds good, but I'm not sure yet. It also is difficult to know what is going to increase my bill. I'm all for the environment, but not if it puts a burden on me.

What we want them to think

I can change my energy usage behavior because the change does not require much action or time, so I can get back to other things and not think about my energy.

Themes that will move them

- Tell them what they can do. With clarity and empathy
- Shape the path forward
- Confirm that this is hard, but we can help
- Rewards for change

Tap into their emotions by celebrating changes while making the path forward simple and clear. Find simple ways to spark some interest, no matter how small.

The Engaged

What they think now:

I'm trying, but it is only sometimes top of mind. I find I get easily distracted, or the cost of the changes I need to make is prohibitive.

What we want them to think

National Grid has helped me better understand what I can do for myself, and I can see the financial impact of my decisions. The following steps to better energy usage are understandable and doable.

Themes that will move them

- Empathy
- Proactive ways to communicate with them
- Community
- Automated solutions, reminders
- Discounts, training, or other opportunities to improve
- Avoiding waste, and at the same time, avoiding surprises

We must recognize and support this mindset and offer new ways to build on their actions. Provide them with more personalized information and reports.

The Motivated

What they think now:

I want to do more; I know I should, but I need to figure out where to start or who to trust. We need to make change happen now but what can one person truly affect?

What we want them to think

National Grid has helped me be more informed and provided a critical community connection of like-minded neighbors. Together we are stronger, and we are making a difference.

Themes that will move them

- Decision and support tools
- Clear paths to success
- Recognition and support
- Gamification, streaks
- Goal setting and comparisons
- Shareable information and stackable content

We need to find ways to support and reward them so they can support others. Now we can engage them in broader communities and services to support the desire to do more.

The Activated

What they think now:

I consider sustainable offerings with every choice I make, but each decision requires a lot of effort.

What we want them to think

I feel part of the solution and National Grid has the latest information I need in an easy to digest and share format.

Themes that will move them

- Help them find more or new ways to be sustainable
- Help them evangelize current activities
- A smooth, seamless path to success
- Show them goals they have set is achieved
- Communities
- Competitions
- Loyalty and referrals

While this group will probably be the smallest, we must give them the tools to evangelize. How might we whelp them find new ways to be the connection to the larger community?

Changing mental models won't be an easy task

On one side, you are doing amazing philanthropy work, on the other, people feel like you are out to get them.

33%

Only 33% of consumers find it very easy to understand and pay their energy bills, and nearly all (92%) want new digital bill capabilities, including the ability to analyze usage.

1/3

Less than 1/3 understand the terms renewable energy, sustainability, carbon neutral, and net zero.

19%

Only 19% of consumers are highly satisfied with the values of their energy provider.

28%

Energy providers want consumers to adopt new energy products and services — but when they do, only 28% are highly satisfied with the experience.

**With Tesla, we helped
fundamentally change
the market.**

Customers needed clarification about moving to an electric vehicle. We took their objections and turned them into stories and tools to help them visualize how they would use a Tesla.

We did all of this before we gave them any long-form content. The results were 2 million cars sold and this tool is no longer needed because people are comfortable to go electric.
